Initial draft.

About

ABOUT THIS PUBLICATION

This publication serves as a reference to enabling PDF Push Functionality. PDF Push is the function of sending messages directly to a user's email inbox as an encrypted PDF attachment. The configuration setting is tied to the sending user's user-type and must be enabled on the SecureMail service by modifying both the company and the sending user type configurations. To request this configuration, or if you need further assistance, call **Technical Support: 973.455.1245 Extension 2**.

INTENDED AUDIENCE

The intended audience is an integrator of an On-Premise installation.

1

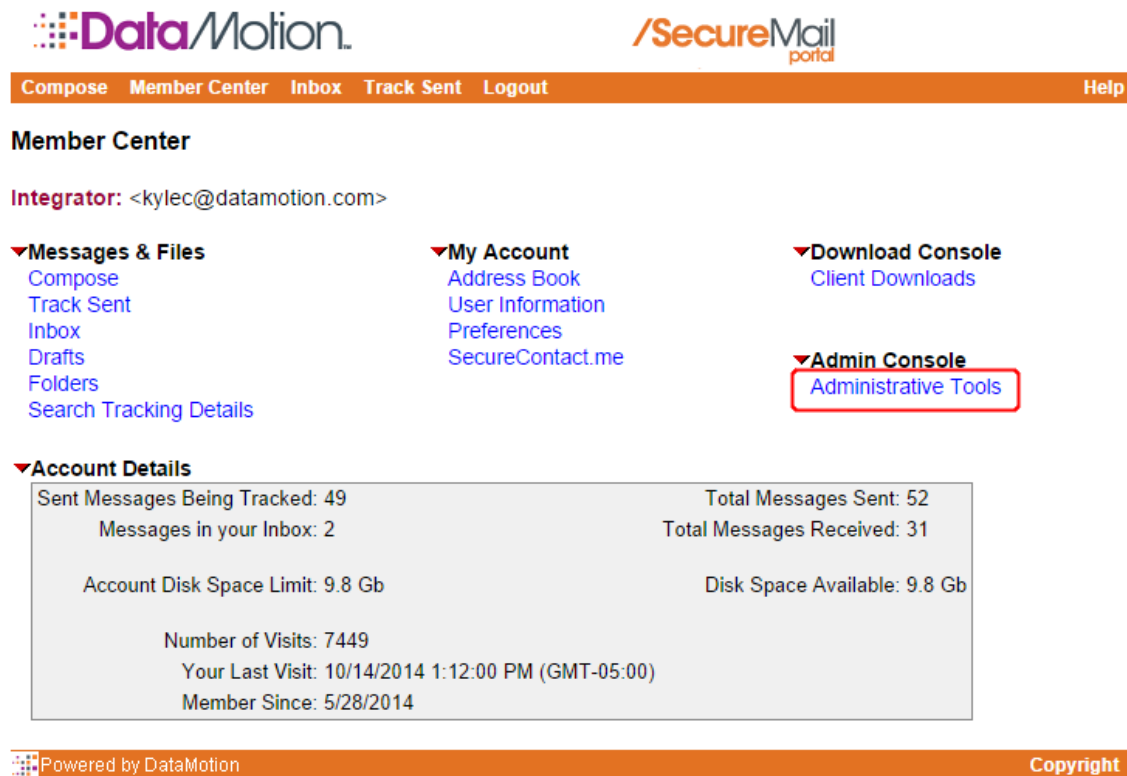

Enabling PDF Push Functionality

ENABLING PDF PUSH FOR COMPANY

To enable PDF Push for the company, please make sure you perform the following steps while logged in using Integrator role credentials. If you do not have such credentials, contact **Technical Support: 973.455.1245 Extension 2.**

Perform the following steps:

1. Log in to <https://ssl.datamotion.com> with an Integrator account.
2. Click the **Administrative Tools** link under **Admin Console**.

The screenshot shows the DataMotion /SecureMail portal interface. At the top, there are logos for DataMotion and /SecureMail portal. Below the logos is a navigation bar with links: Compose, Member Center, Inbox, Track Sent, Logout, and Help. The main content area is titled "Member Center" and shows the user's email address: Integrator: <kylec@datamotion.com>. There are three main sections: "Messages & Files" (with links: Compose, Track Sent, Inbox, Drafts, Folders, Search Tracking Details), "My Account" (with links: Address Book, User Information, Preferences, SecureContact.me), and "Download Console" (with link: Client Downloads). Below these is the "Admin Console" section, which is highlighted with a red box and contains the link "Administrative Tools". At the bottom of the Admin Console section, there is a table with account details:

Sent Messages Being Tracked: 49	Total Messages Sent: 52
Messages in your Inbox: 2	Total Messages Received: 31
Account Disk Space Limit: 9.8 Gb	Disk Space Available: 9.8 Gb
Number of Visits: 7449	
Your Last Visit: 10/14/2014 1:12:00 PM (GMT-05:00)	
Member Since: 5/28/2014	

At the bottom of the page, there is a footer with "Powered by DataMotion" and "Copyright".

- Click the **Company Properties** icon for your company.

- On the resulting page click **Company Properties**.

- Scroll down and find **Allow Sender Initiated PDF Push** under **Interface – Create Message**.

- Makes sure to click **On** for this option and click **Save** at the top.

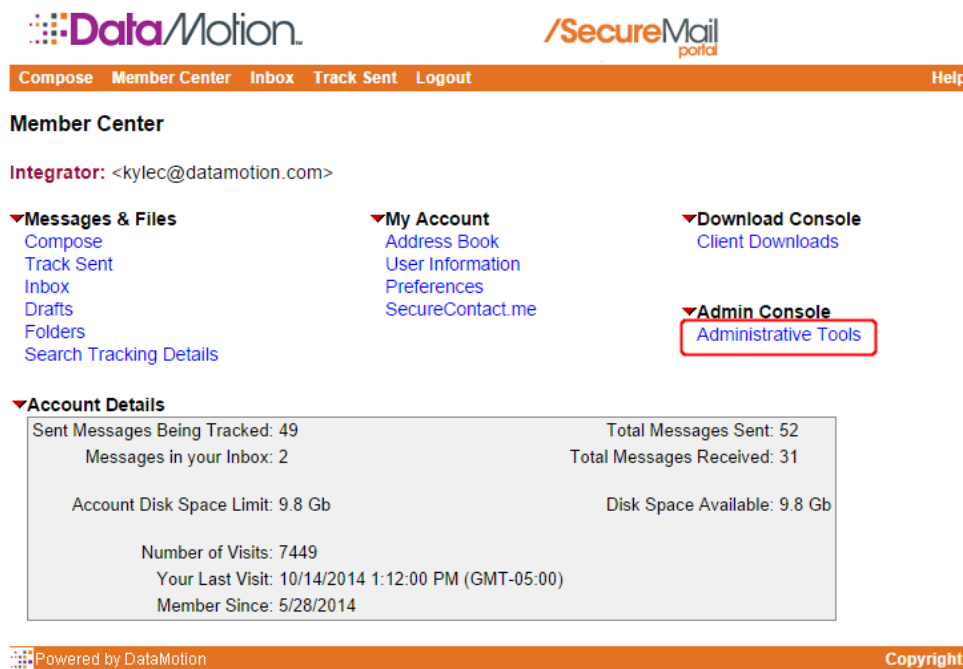

ENABLING PDF PUSH FOR USERS

To enable PDF Push for the licensed sending user, please make sure that it is enabled for the company. Once it has been enabled you can perform the following steps as an Integrator role.

Perform the following steps:

- Log in to <https://ssl.datamotion.com> with an Integrator account.
- Click the **Administrative Tools** link under **Admin Console**.

- Click the **Company Properties** icon for your company.

- On the resulting page click on the **User Type** you wish to enable this feature for.

As an alternative, you may create a new user type by clicking on an existing user type and clicking on the “Add” button. Manually copy the settings of an existing user type to the new user type. SecureMail 500 and SecureMail 500 Admin are usually used as the reference user types

- On the resulting page find the **Sender initiated PDF Push** option under **Interface – General** and change its setting to **On**.
- Click the **Save** button at the top of the page.

SETTING THE PDF PASSWORD AND PASSWORD HINT

Accounts configured to send via PDF Push have the ability to override the standard PDF Push password. This is a useful Secure Mail sending method for recipients who have not created a password, including new recipients, and for those who are likely to resist using the web portal.

To set a password override and a password hint, the sender will need to have a method for adding X-Headers to a draft email. Most email clients do not allow editing of headers prior to sending the message. An alternative is to create and send the email programmatically, where access to the X-Headers is readily available.

X-Header Name	Description
X-ANSWER	A string of printable characters that will be used as the PDF password
X-HINT	A hint to the password used to encrypt the PDF file. This hint will be shown in the recipient’s notification message that includes the attached encrypted PDF file.
