INTRODUCTION

This release note provides information about the DataMotion SCP Release 7.12. This release is a culmination of changes and enhancements as well as bug fixes for the platform. An overview of these enhancements is included in this document as are highlights of various bug fixes.

NEW FEATURES IN THIS RELEASE

MESSAGE THREADING

Messages will now have the ability to have threaded tracking which also includes new settings in the administrative area called **Track thread via plaintext subject**.

The screenshot shows the 'Message Center Company Settings' interface. It includes a header with an envelope icon and the title 'Message Center Company Settings'. Below the header are four settings: 'Language for Notification Emails' set to 'English (US)', 'Time zone Displayed in Notifications' set to '(UTC-05:00)', 'PlainText Delivery' with a toggle switch turned on, and 'Use 24 hour clock' with a toggle switch turned on. The 'Track thread via plaintext subject' setting is highlighted with a red box and has a toggle switch turned on.

When enabled messages shall be tracked by whatever their subject is so long as PlainText Delivery is enabled.

CONNECTION MANAGER

This release marks the release of the Connection Manager which is a versatile tool designed to facilitate seamless content delivery across various protocols, including webhooks, APIs, and other methods where direct transfer is essential. This tool is particularly valuable for scenarios where data needs to be transferred efficiently and accurately without manual intervention.

At a high level some of the main functions of the Connection Manager include:

- Content Delivery
 - » Connection Manager ensures that content is delivered reliably over different protocols, making it adaptable to various integration needs.
- Form Prefill Capability
 - » One of the standout features of Connection Manager is its ability to prefill form fields by fetching data from external sources. This capability streamlines the user experience by reducing the need for manual data entry and minimizing errors.
- Integration Scope
 - » While our DataMotion Integration Gateway handles deeply written integrations that require direct field manipulation, Connection Manager is designed to manage all other integration tasks. It acts as

a bridge for content transfer that doesn't involve altering specific fields, providing a more flexible and efficient solution.

Webhooks

Over time the Connection Manager will provide a wide range of content delivery and integration options, and this release includes the capability to create webhooks to integrate secure messaging with their applications. Creation of these requires administrative privileges in order to access the Connection Manager so please be aware of this when creating webhooks.

SALESFORCE INTEGRATION

This release includes the latest form of DataMotion's Salesforce integration which has been designed to seamlessly integrate secure messaging organization's Salesforce environments. This integration requires the assistance of DataMotion personnel to utilize to its full effectiveness so please reach out to support@datamotion.com for details.

MIGRATIONS

As of this release it will be possible to migrate tenants who currently have managed instances or on-premise versions of the DataMotion system. To migrate, please reach out to support@datamotion.com as all of your users and data needs to be moved over to the Secure Platform which requires the assistance of DataMotion personnel.

CHANGES AND ENHANCEMENTS IN THIS RELEASE

JENAI IMPROVEMENTS

This release includes a variety of general JenAI improvements including efficiency and chat response accuracy. Also, as part of these improvements is an addition to the Secure Forms editor which allows you to create forms using JenAI Assist. This can be done whenever you are creating a new form, and you can enter an appropriate prompt or upload an image to the editor and JenAI will create the form for you based off of the prompt or image.

SMTP SECURITY IMPROVEMENTS (DKIM)

As of this release all messages shall be DKIM signed. If your domain does not have DKIM appropriately configured please reach out to DataMotion support at support@datamotion.com as it is crucial to have this in place in order to avoid messages being blocked by other email providers.

DATAMOTION LAUNCHER (LOW CODE WIDGET) ATTRIBUTE ENHANCEMENTS

Numerous additional parameters have been added to the DataMotion Launcher (also known as the Low Code Widget) to improve customization options for users. These include but are not limited to:

- subject

- » Controls the subject that users will utilize.
- hide-subject
 - » Hides the subject field entirely.
- recipients
 - » Controls who the user may send messages to.

SECURE MESSAGE CENTER INBOX SEARCH IMPROVEMENTS

When searching for messages in the Inbox of the Secure Message Center it is now possible to search for message recipients beyond the first recipient. This can be done from the Secure Message Center web portal interface and simply typing in an appropriate recipient in the search box like the below:

RESOLVED ISSUES

The following-reported issues have been resolved in this release. If this is a Maintenance Release, the most recent Maintenance Release is listed first. (Note that some Maintenance Releases may not be listed because they do not always require documentation).

Table 1. Resolved Issues

Original Issue	Description/Resolution	Notes
Deleting subject or recipient rules would sometimes cause the forms editor to hang.	Sometimes editing and deleting subject or recipient rules in the Form Properties of the form editor caused those rules to become inaccessible. This has been corrected and should no longer occur.	Only affected form creation for administrators on the Secure Platform web portal.
Sometimes errors would occur when submitting forms.	When textbox components were used in a form and certain parameters were selected errors would be displayed when the form was submitted. This has been corrected and should no longer occur.	Only affected form submission when textbox components were used under certain conditions.
Slide toggle components were not saving properly.	When using a slide toggle component in the form editor, sometimes the data entered for the component was not saving. This has been corrected and should no longer occur.	Only affected form creation for administrators on the Secure Platform web portal.
Form recipients would sometimes revert.	Sometimes entering and saving a new recipient for a form would revert it to the default recipient. This has been corrected and should no longer occur.	Only affected form creation for administrators on the Secure Platform web portal.
The delete button on subject rules would sometimes disappear.	When creating advanced subject rules for forms via the Form Properties view, at times the delete button for those rules would disappear after a rule was created. This has been corrected and should no longer occur.	Only affected form creation for administrators on the Secure Platform web portal.

KNOWN ISSUES

The following table includes known issues discovered but not resolved as of this release.

Issue
When changing a user's username, there is no warning given to the user and they are logged out.
In the Account Type Settings Report some Previous Value fields are not displayed when after changing a setting.
Sometimes users will be asked to sign in twice when utilizing Microsoft as their Single Sign On option.
Creating a user as an Admin with certain parameters checked would result in the user not being created as expected.
