INTRODUCTION

This release note provides information about the DataMotion SCP Release 7.17. This release is a culmination of enhancements and bug fixes for the platform.

CHANGES AND ENHANCEMENTS IN THIS RELEASE

IDLE SESSION LIMIT

This release will include the capability to have an idle session time set on the web portal of the secure platform where by default sessions will expire after 30 minutes of inactivity and logout the user. All admins can configure this setting via the Message Center Company Settings area which will look something like this:

Description	Value
User Interface Type	MessageCenter
Session inactivity limit in minutes (0 means no limit)	30

When the limit is about to be reached an warning will appear on the screen informing the user they are about to be logged out that can be dismissed by simply performing any actions on the portal to refresh the inactivity timer.

SECURITY IMPROVEMENTS

Numerous overall security improvements have been made as part of the secure platform's standard development and DataMotion's continuous security improvements efforts.

RESOLVED ISSUES

The following-reported issues have been resolved in this release. If this is a Maintenance Release, the most recent Maintenance Release is listed first. (Note that some Maintenance Releases may not be listed because they do not always require documentation).

Table 1. Resolved Issues

Original Issue	Description/Resolution	Notes
At times uploading a large file would cause infinite loading.	Certain large attachment files would cause the web portal to infinitely load. Refreshing the browser would correct this, however improvements have been made to ensure that this should no longer occur in the future.	Affected composing a message using the secure platform's web portal.
Very large files were not uploading properly.	When file attachments exceeded a significant size they would not upload properly to the web portal. This has been corrected and should no longer occur.	Affected composing a message using the secure platform's web portal.
Recipients were being created via secure forms.	When setting a user that did not exist as the recipient of a secure form that user would be created in the system. This has been corrected and should no longer occur.	Affected secure forms creation and submission on the secure platform's web portal.
Updating a user's username would sometimes not prompt an error.	An error should have been displayed when a user attempted to change their username to an already existing username but this was not occurring as expected. This has been corrected and should no longer occur.	Affected user editing on the secure platform web portal.

KNOWN ISSUES

The following table includes known issues discovered but not resolved as of this release.

Issue
When changing a user's username, there is no warning given to the user and they are logged out.
In the Account Type Settings Report some Previous Value fields are not displayed when after changing a setting.
