INTRODUCTION

This release note provides information about the DataMotion SCP Release 7.21. This release is a culmination of bug fixes for the platform as this is primarily a maintenance release.

RESOLVED ISSUES

The following-reported issues have been resolved in this release. If this is a Maintenance Release, the most recent Maintenance Release is listed first. (Note that some Maintenance Releases may not be listed because they do not always require documentation).

Table 1. Resolved Issues

Original Issue	Description/Resolution	Notes
Special characters when downloading emails as PDF would be present but unexpected.	Accented characters which appeared properly in messages sent via the portal or in Microsoft Outlook would be fine but not appear properly in downloaded PDF messages. This has been corrected and should no longer occur.	Affected downloading messages as PDF which had accented characters. Addresses Ticket#10236219.
Anonymous form submission would not always be accessible as expected.	When the default anonymous sender was removed from a form, and a form was accessed anonymously, it would not be accessible as expected. This has been corrected and should no longer occur.	Affected form submission for the web portal and any embedded forms.
Special characters would not always render properly.	Certain special characters were rendering improperly when entered into the subject line of a message. This has been corrected and should no longer occur.	Affected message sending using the secure platform.
Special characters would sometimes unexpectedly appear in messages sent via Outlook.	When sending secure messages via Outlook sometimes unexpected special characters would appear in the message body within the web portal. This has been corrected and should no longer occur.	Affected message sending using the secure platform.
Form submission was sometimes displaying the wrong username.	Sometimes submission of forms was displaying the submitter's username when clicking on the form link instead of the reviewer's username. This has been corrected and should no longer occur.	Affected form submission on the web portal and any embedded forms.

Original Issue	Description/Resolution	Notes
Sometimes comments could not be added to forms.	Sometimes form comments could not be added by a reviewer when a form had the required review flag set. This has been corrected and should no longer occur.	Affected form submission on the web portal and any embedded forms.
Sometimes scrolling a form would not work after submission.	When a thank you screen or header and footer was very long the ability to scroll the form would not always work. This has been corrected and should no longer occur.	Affected form submission on the web portal and any embedded forms.
Placing images or videos in the form footer would sometimes cause scrolling issues.	When images or videos were placed in the footer of a form the footer would sometimes overlap into the form body and cause scrolling issues. This has been corrected and should no longer occur.	Affected form submission on the web portal and any embedded forms.

KNOWN ISSUES

The following table includes known issues discovered but not resolved as of this release.

Issue
When changing a user's username, there is no warning given to the user and they are logged out.
In the Account Type Settings Report some Previous Value fields are not displayed when after changing a setting.
