INTRODUCTION

This release note provides information about the DataMotion SCP Release 7.23. This release is a culmination of bug fixes for the platform as this is primarily a maintenance release.

RESOLVED ISSUES

The following-reported issues have been resolved in this release. If this is a Maintenance Release, the most recent Maintenance Release is listed first. (Note that some Maintenance Releases may not be listed because they do not always require documentation).

Table 1. Resolved Issues

Original Issue	Description/Resolution	Notes
The Secure Message Center Widget sometimes had an inconsistent loading experience.	A patch has been implemented to improve how sessions and token refresh are handled across our platform. Previously, under certain conditions, the system could repeatedly attempt to refresh a session token without success, which might impact performance and cause users to occasionally need to refresh a page containing the Secure Message Center Widget for it to load properly.	This update ensures more reliable session management and prevents unnecessary retry loops. Customers using both the Portal and the Secure Message Center Widget are affected by this change. Additionally, the /token/refresh endpoint will now support tokens minted by confidential clients issued to our customers.
Sometimes users would be sent into a loop when attempting to sign out of the web portal.	At times users would be unable to sign out of the web portal and be sent into a loop due to issues with the refresh tokens on the platform. This has been addressed and should no longer occur.	Affected users of the web portal on the Secure Platform.

KNOWN ISSUES

The following table includes known issues discovered but not resolved as of this release.

Issue
When changing a user's username, there is no warning given to the user and they are logged out.
In the Account Type Settings Report some Previous Value fields are not displayed when after changing a setting.
