INTRODUCTION

This release note provides information about the DataMotion SCP Release 7.26. This release is a culmination of bug fixes and enhancements for the platform in this release. General updates and platform improvements have also been performed for maintenance purposes to enhance the overall user experience.

CHANGES AND ENHANCEMENTS IN THIS RELEASE

REPORT INTERFACE

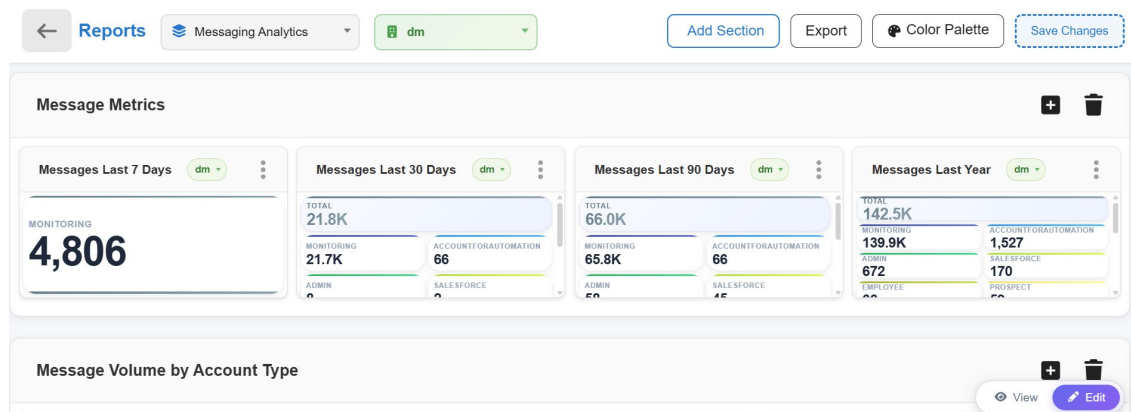

The Reports available to all administrators on the Secure Platform have been updated to include new viewing and generation options. It is possible to either keep the original view or switch to this new view using the Message Center Company Settings and changing the value for the new Reporting Style setting. This is a simple selection and includes New (for the updated reporting style) and Legacy (for the original reporting style) and looks something like this:

The screenshot shows a form with three fields: 'Reporting Style', 'Tenant Name', and 'IP Filtering on Admin'. The 'Reporting Style' dropdown menu is open, showing two options: 'New' (selected with a blue checkmark) and 'Legacy'.

New Reports View

The New option for the Reporting Style has a substantial number of additional features compared to the original view style and you should initially be greeted with something like the following:

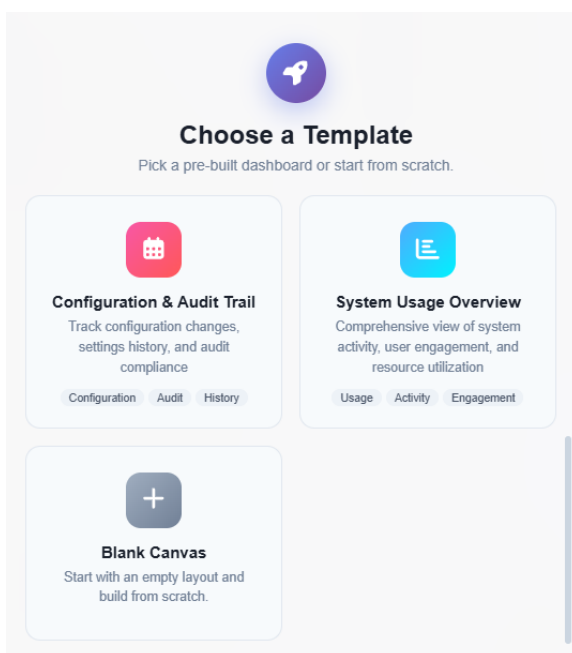

PUBLIC

Public Release Authorized

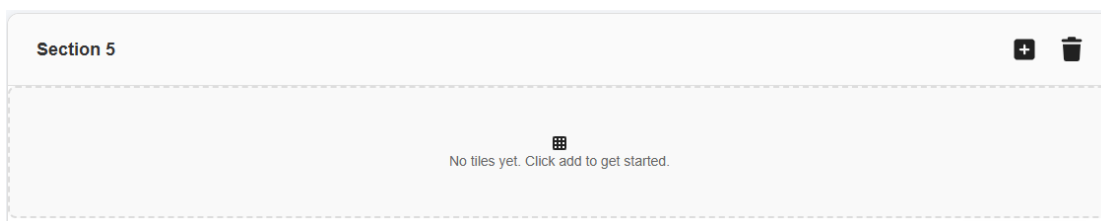

There are a variety of built in dashboards that an admin can select from by using the upper left most drop-down which include the following:

- Login Activity Dashboard
- Message Analytics
- Account Management Dashboard
- Configuration & Audit Trail
- System Usage Overview

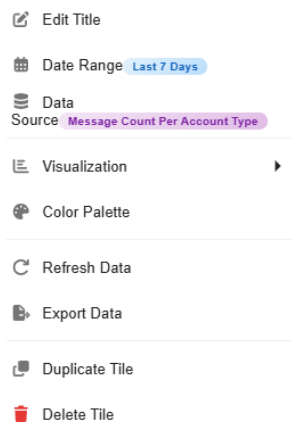

It is also possible to create a brand-new dashboard via this menu which will provide you with the option of selecting standard templates or a completely blank canvas.

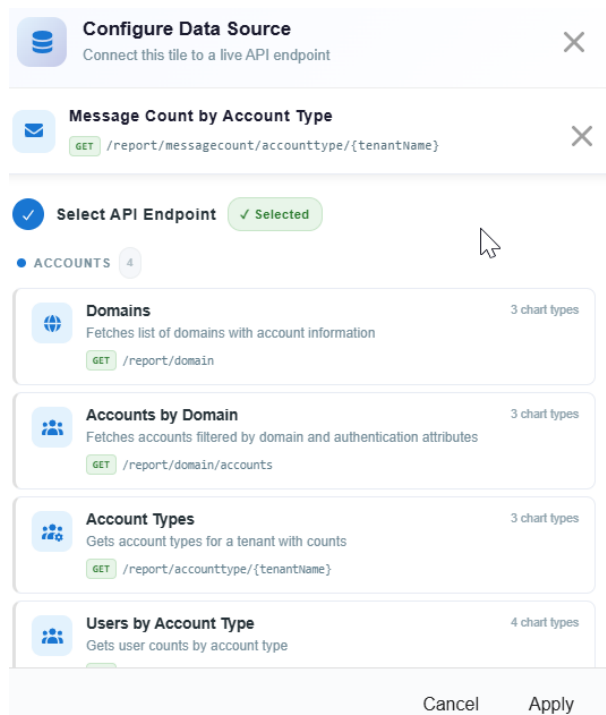

You can also add new sections to any dashboard by clicking on the Add Section button at the top of the view which will create a new blank section like this:

You can click on the plus icon within the new section to add a reporting tile (these contain information such as login details, message counts, etc.) and then click the dots icon on the tile to open the tile configuration menu which should look something like this:

This menu will allow you to perform a variety of functions such as changing the range, colors, chart type, and perform exports of data. You can also change the data source of the tile which will bring up a menu containing all available data sources for your tenant and look something like this:

SECURE PLATFORM API SWAGGER UPDATE

The APIs on the Secure Platform have had their swagger page updated to provide better clarity. This applies to all functions within the API, and the swagger page should look something like this:

There is now also an option to switch to dark mode if desired.

RESOLVED ISSUES

The following-reported issues have been resolved in this release. If this is a Maintenance Release, the most recent Maintenance Release is listed first. (Note that some Maintenance Releases may not be listed because they do not always require documentation).

Table 1. Resolved Issues

Original Issue	Description/Resolution	Notes
Downloading reports sometimes would not display the icon.	At times the icon for downloading reports would not display on the label. Report downloads themselves were not affected and this was simply a visual issue. This has been corrected and should no longer occur.	Affected report downloads for admins on the Secure Platform web portal.

KNOWN ISSUES

The following table includes known issues discovered but not resolved as of this release.

Table 2. Known Issues

Issue
When changing a user's username, there is no warning given to the user and they are logged out.
In the Account Type Settings Report some Previous Value fields are not displayed when after changing a setting.
