INTRODUCTION

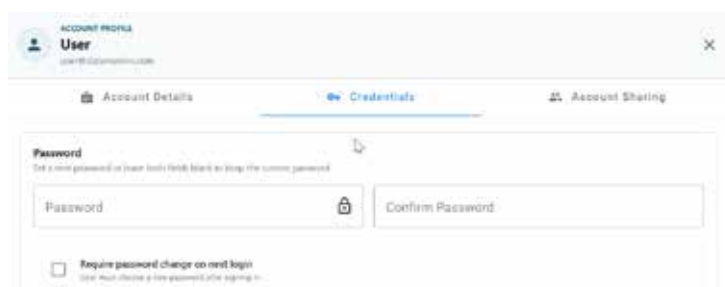

This release note provides information about the DataMotion SCP Release 7.30. This release is a culmination of bug fixes and enhancements for the platform in this release. General updates and platform improvements have also been performed for maintenance purposes to enhance the overall user experience.

CHANGES AND ENHANCEMENTS IN THIS RELEASE

ACCOUNT DETAILS CONTROLS

This release includes some updates to the overall account controls available to admins on the Secure Platform. There will now be an additional tab on a user's account profile when viewing their details called Credentials which allows for granular control over a user's set passwords and linked identity providers right from within the platform's interface.

NOTE: All password controls including setting a password for a user manually are now controlled from this new Credentials tab as shown below.

As for what's new, however it is now possible to easily unlink a user's existing password if they are going to be setup with an identity provider or if it is not desired for them to utilize a password at all depending on customer workflows. The same also applies to identity providers where it is also possible to unlink an undesired identity provider from a user using the same unlinking style button as shown in the image below.

MESSAGE REFRESH

All messages within the user interface will now automatically refresh when new messages are received.

NOTIFICATION SUPPRESSION

This release has added a way to suppress message notifications from within the admin settings of the Secure Platform. This is a simple toggle within the settings that states Receive Notifications and looks something like this:

Receive Notifications

NOTE: This currently applies to the message waiting notices and others may be added in the future.

CUSTOM NOTIFICATION SETTINGS

It is now possible to configure custom notification settings within the platform user interface, and this is done via either account type or overall company settings and would look something like this:

A screenshot of a web form titled "Custom Notification Settings". It features two input fields: the first is labeled "Key" and the second is labeled "Value". Below these fields is a blue button with the text "Add".

RESOLVED ISSUES

The following-reported issues have been resolved in this release. If this is a Maintenance Release, the most recent Maintenance Release is listed first. (Note that some Maintenance Releases may not be listed because they do not always require documentation).

Table 1. Resolved Issues

Original Issue	Description / Resolution	Notes
Sometimes downloaded PDF messages would not display correctly.	At times certain messages would not properly display inline images or the expected text when they were downloaded via the user interface as PDF. This has been corrected and should no longer occur.	Affects users on the web portal of the Secure Platform who download messages as PDF.
The reactivate option was missing from the Account List options.	The three dots menu for the Account List view did not have the reactivate option available when users were selected when it should have been available. This has been corrected and should no longer occur.	Affects users of the web portal who perform user administration on the Secure Platform.
At times messages would not send depending on their overall size.	Certain messages using attachments larger than 1GB would not send as expected. This has been corrected and should no longer occur.	Affects all users of the Secure Platform who send messages.

KNOWN ISSUES

The following table includes known issues discovered but not resolved as of this release.

Table 2. Known Issues

Issue
When changing a user's username, there is no warning given to the user and they are logged out.
In the Account Type Settings Report some Previous Value fields are not displayed when after changing a setting.
