INTRODUCTION

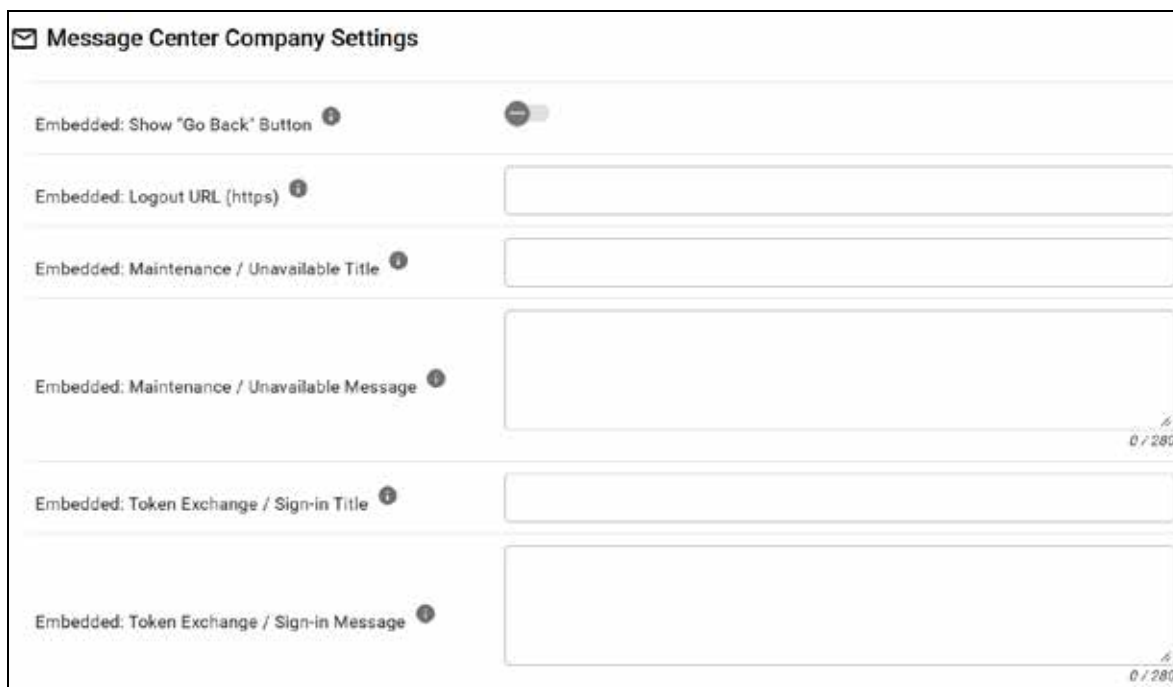

This release note provides information about the DataMotion SCP Release 7.32. This release is a culmination of bug fixes and enhancements for the platform in this release. General updates and platform improvements have also been performed for maintenance purposes to enhance the overall user experience.

CHANGES AND ENHANCEMENTS IN THIS RELEASE

MESSAGE CENTER SETTINGS

This release includes numerous setting enhancements for administrators who are able to configure the Message Center Company Settings for their tenant on the platform.

These settings will be near the end of the company settings view and look something like this:

The screenshot shows a web form titled "Message Center Company Settings" with a toggle switch for "Embedded: Show 'Go Back' Button". Below this are several text input fields for "Embedded: Logout URL (https)", "Embedded: Maintenance / Unavailable Title", "Embedded: Maintenance / Unavailable Message", "Embedded: Token Exchange / Sign-in Title", and "Embedded: Token Exchange / Sign-in Message". Each field has a character count indicator (e.g., 0 / 250).

In detail, these settings include:

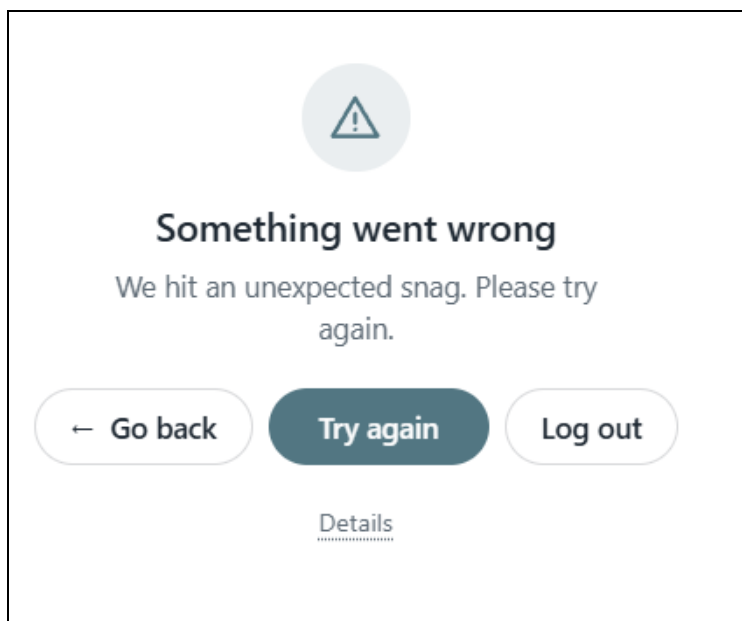

- n Embedded: Show “Go Back” Button
 - » When enabled this will display a Go Back button on the page when enabled. This applies for those who use the embedded (Low Code) experience and will only appear during maintenance status periods.

PUBLIC

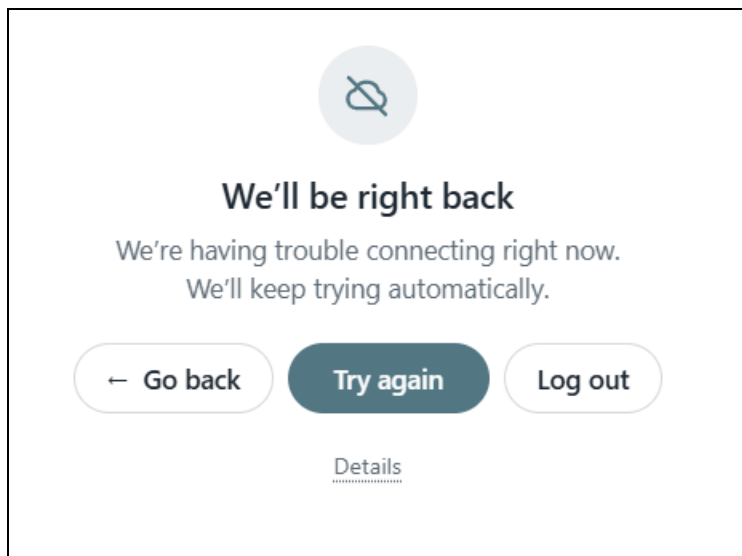

Public Release Authorized

- n Embedded: Logout URL (https)
 - » When a value is set, this will display a Logout option for those using the embedded (Low Code) experience and appear during a maintenance event. This must be a valid URL which includes https:// and cannot be any other text. Please note that the logout redirect will affect the entire page (which includes the page hosting the embedded (Low Code) widget) to the logout URL value set in this field.
- n Embedded: Maintenance / Unavailable Title
 - » When a value is set (has a max of 80 characters and only text may be entered), this will display a different title when the system is under maintenance and not accessible to users using the embedded (Low Code) experience.
- n Embedded: Maintenance / Unavailable Message
 - » When a value is set (has a max of 280 characters and only text can be entered), this will display an alternative message when the system is under maintenance and not accessible to users using the embedded (Low Code) experience.
- n Embedded: Token Exchange / Sign-in Title
 - » When a value is set (has a max of 80 characters and only text may be entered), this will display a different title when a user is unable to access the embedded (Low Code) experience for any reason.
- n Embedded: Token Exchange / Sign-in Message
 - » When a value is set (has a max of 280 characters and only text can be entered), this will display an alternative message to a user of the embedded (Low Code) experience whenever they are unable gain access.

As an example, when the logout and back settings are set a user would see something like this during a sign-in event issue:

And during a maintenance type event a user would see something like this:

RESOLVED ISSUES

The following-reported issues have been resolved in this release. If this is a Maintenance Release, the most recent Maintenance Release is listed first. (Note that some Maintenance Releases may not be listed because they do not always require documentation).

Table 1. Resolved Issues

Original Issue	Description / Resolution	Notes

KNOWN ISSUES

The following table includes known issues discovered but not resolved as of this release.

Table 2. Known Issues

Issue
When changing a user's username, there is no warning given to the user and they are logged out.
In the Account Type Settings Report some Previous Value fields are not displayed when after changing a setting.
